Summary

Full-stack developer (MERN stack) building and deploying AI-integrated, real-time web applications with React, Angular, Node.js, Express.js, and MongoDB. Experienced in REST API design, JWT authentication, Socket.IO, TypeScript, and cloud deployment (Vercel, Render). 2025 Computer Engineering graduate with 80+ Data Structures & Algorithms problems solved in Java, seeking a full-stack developer role to apply AI-integration and full-stack experience.

Education

PCET NMIET (SPPU)

2021 – 2025

Bachelor of Engineering in Computer Engineering | CGPA: 7.07

Technical Skills

Languages: JavaScript, TypeScript, Java

Frontend: React, Angular, Tailwind CSS, Angular Material, PrimeNG, HTML, CSS

Backend: Node.js, Express.js, Socket.IO, REST API, Better Auth

Database: MongoDB, SQL

Tools & Platforms: Git, GitHub, Postman, Vercel, Render, Jest, React Testing Library, GitHub Actions

Open Source Contributions

DevBoard

MERN Kanban App

github.com/anoopcodehack/devboard

- Added try/catch error handling across API routes, eliminating unhandled server crashes on invalid requests, following a Git branching and pull request-based code review workflow — [PR #105](#).
- Built an AI-powered tag auto-suggestion feature using the Gemini API and a custom React hook, analyzing task content to recommend relevant tags in real time — [PR #127](#).

Projects

DevLens | *React, TypeScript, Node.js, Express, MongoDB, Groq API* | [live](#)

- AI-powered code review tool, deployed live on Vercel, with a responsive interface that analyzes submitted code and generates ratings, suggestions, and best practices across 6 languages.
- Integrated Groq API (LLaMA 3.3 70B) and implemented JWT authentication with protected routes on frontend and backend.
- Built a review history feature persisting all past AI reviews in MongoDB per user for a full audit trail.
- Managed complex async state (loading, success, error) using `useReducer`, eliminating prop drilling across components.
- Wrote component and integration tests for Dashboard and Documentation pages using Jest and React Testing Library, covering rendering, user interactions, async form input, and navigation flows with mocked API/auth dependencies.

stark. | *React, TypeScript, npm* | [npm](#) | [docs](#)

- Published `@omkarwarik1204/stark` on npm — a React component library with 6 production-ready UI components, averaging 38+ weekly downloads across 6 released versions.
- Set up build pipeline using Vite library mode with dual ESM/CJS output and TypeScript declaration files.
- Built and deployed a documentation site (Webstark) showcasing live component demos and usage examples.

Helio | *Angular, Node.js, Express, MongoDB, Groq API, Better Auth* | [live](#)

- AI-powered study planner generating personalized 7-day study plans and an AI chat assistant.
- Integrated Groq API (LLaMA 3.3 70B) for personalized study plans and solved cross-domain auth using a Bearer token strategy via Better Auth.
- Built protected REST APIs with custom auth middleware and MongoDB-backed AI rate limiting (5 requests/day).
- Configured Angular environment-based API switching (dev/prod) and HTTP interceptors for automatic token injection.
