Summary

Full-stack developer (MERN stack) building and deploying Generative AI-integrated, real-time web and mobile applications with React, React Native, Node.js, Express.js, and MongoDB. Experienced in REST API design, JWT authentication, Socket.IO, TypeScript, LLM integration (Groq, Gemini APIs), and cloud deployment (Vercel, Render). 2025 Computer Engineering graduate with 120+ LeetCode problems solved (Java, SQL, JavaScript).

Education

PCET NMIET (SPPU)

2021 – 2025

Bachelor of Engineering in Computer Engineering | CGPA: 7.07

Technical Skills

Languages: JavaScript, TypeScript, Java

Frontend: React, React Native (Expo), Angular, Tailwind CSS, Angular Material, PrimeNG, HTML, CSS

Backend: Node.js, Express.js, Socket.IO, REST API, Firebase Auth, Better Auth

Generative AI / LLM: Groq API (LLaMA 3.3 70B), Gemini API

Database: MongoDB, SQL

Tools & Platforms: Git, GitHub, Postman, Vercel, Render, GitHub Actions

Open Source Contributions

DevBoard | MERN Kanban App

github.com/anoopcodehack/devboard

- Added try/catch error handling across API routes, preventing server crashes on invalid requests — PR #105.
- Built AI-powered tag auto-suggestion using the Gemini API and a custom React hook — PR #127.
- Implemented a priority filter dropdown to narrow the Kanban board to High, Medium, Low, or All tasks — PR #341.

Projects

QuickList | React Native, TypeScript, MongoDB, Firebase | [GitHub](#) | [APK](#)

- Built a full-stack hyperlocal marketplace for Android where users post listings with photos and browse items near them. The app is React Native (Expo, NativeWind) and the backend is a REST API (Express, TypeScript, MongoDB) secured with Firebase Auth token verification.
- Implemented nearby search (“Zap”) using MongoDB **2dsphere** geospatial indexes and **\$near** queries within a chosen radius, based on the device’s location.
- Added server-side pagination and infinite scroll via a reusable React hook that blocks duplicate and concurrent requests.
- Reduced feed query time by ~27% (64 ms → 47 ms on 500 listings) using Mongoose **.lean()** on read-only endpoints, and added a compound **{status, createdAt}** index.
- Built push and in-app notifications: posting a listing alerts users within 10 km through Expo Push and Firebase Cloud Messaging in batches, with an unread-count bell badge and a notifications screen.
- Added a “Contact Seller” flow that opens a WhatsApp chat with the seller via deep link and saves the listing to an Interests tab, so buyers and sellers connect without in-app chat or payments.

stark. | React, TypeScript, npm | [npm](#) | [docs](#)

- Published **@omkarwarik1204/stark**, a lightweight React + TypeScript component library on npm with 900+ downloads: 6 reusable UI components, ~3 KB gzipped, across 6 versioned releases.
- Set up build pipeline using Vite library mode with dual ESM/CJS output and TypeScript declaration files.
- Built and deployed a documentation site (Webstark) showcasing live component demos and usage examples.

DevLens | React, TypeScript, Node.js, Express, MongoDB, Groq API | [live](#)

- Generative AI-powered code review tool that analyzes submitted code and returns ratings, suggestions, and best practices across 6 languages; frontend on Vercel, backend on Render.
- Integrated Groq API (LLaMA 3.3 70B) through an Express backend to generate reviews from user-submitted code.
- Implemented JWT authentication with protected routes, plus per-user review history stored in MongoDB.
- Managed async request state (loading, success, error) with **useReducer**, avoiding prop drilling across components.
