Summary

Full-stack developer (MERN/MEAN stack) with hands-on experience building and deploying real-time, AI-powered web applications using React, Angular, Node.js, Express.js, and MongoDB. Proficient in REST API and GraphQL API design, JWT authentication, Socket.IO, and TypeScript. Computer Engineering graduate seeking an entry-level full-stack or MERN/MEAN stack developer role.

Education

B.E. Computer Engineering PCET NMIET, SPPU CGPA: 7.07	2021–2025
HSC , Maharashtra State Board Reliance Foundation School 76.67%	2021
SSC , Maharashtra State Board Reliance Foundation School 82%	2019

Skills

- **Languages:** Java, JavaScript, TypeScript
- **Frontend:** React, Tailwind CSS, Angular, Angular Material, PrimeNG
- **Backend:** Node.js, Express.js, Socket.IO, GraphQL, REST API, Better Auth
- **Database:** MongoDB
- **Tools:** Git, GitHub, Postman, Vercel, Render

Projects

DevLens | React, TypeScript, Node.js, Express.js, MongoDB, Groq AI | Live

- Built and deployed a full-stack AI-powered code review tool — React + TypeScript frontend on Vercel and Node.js/Express backend on Render, supporting end-to-end user flows from auth to AI review.
- Integrated Groq API (LLaMA 3.3 70B) to generate detailed code reviews with ratings, suggestions, and best practices across 6 programming languages.
- Implemented JWT authentication with protected routes on both frontend and backend, preventing unauthorised access to all API endpoints.
- Built review history feature persisting all past AI reviews in MongoDB per user, enabling a full review audit trail across sessions.
- Managed complex async state (loading, success, error) using useReducer, eliminating prop drilling and simplifying state transitions across components.

Helio | Angular, Node.js, Express.js, MongoDB, Groq AI, Better Auth | Live

- Built and deployed a full-stack AI-powered study planner — Angular frontend on Vercel, Node.js/Express backend on Render, serving personalised study plans for multiple users.
- Integrated Groq API (LLaMA 3.3 70B) to generate personalised 7-day study plans, task breakdowns, and an AI chat assistant from user-provided subjects.
- Solved cross-domain auth by replacing cookies with a Bearer token strategy via Better Auth, resolving cookie limitations between different deployment domains.
- Built protected REST APIs with custom auth middleware, MongoDB-backed AI rate limiting (5 requests/day), and session management.
- Configured Angular environment-based API switching (dev/prod) and HTTP interceptors for automatic token injection on all outgoing requests.
